Summary

Backend Engineer with 3.5+ years of experience building scalable distributed backend systems using Node.js, TypeScript, AWS, Redis, PostgreSQL, and MongoDB. Experienced in designing microservices, event-driven systems (Kafka, SQS/SNS), API gateways, caching, and performance optimization.

Experience

Justdial Ltd. Jan 2026 – Present
SDE-1 *Bengaluru, India*

- Built a centralized API Gateway using Node.js and Express.js to route requests across 10+ backend services and environments.
- Automated error-log monitoring and Slack alerts across 7 servers, cutting mean time-to-detect (MTTD) by **40%** and reducing manual monitoring.
- Built a Kafka consumer pipeline to process lead data pushed by the DB team, handling around **120K–130K leads daily** (10K leads per city).
- Implemented Redis caching and load balancing for the IRO management platform, reducing API response time under peak load by **35%**.
- Designed and integrated a WebRTC-based calling service with a third-party provider, owning the backend integration end-to-end.

Mypcot Infotech Pvt. Ltd. May 2024 – Dec 2025
Software Engineer *Mumbai, India*

- Led a monolith-to-microservices migration on AWS ECS using SQS/SNS, improving service isolation and enabling independent deployments.
- Built REST and GraphQL APIs using Node.js and Express.js with rate limiting, retries, and caching, supporting workloads of up to **10,000 RPS**.
- Set up infrastructure with ALB, Auto Scaling Groups, and AWS CodeDeploy, achieving **zero-downtime deployments** across all production releases.
- Built CI/CD pipelines using GitHub Actions and Docker with automated testing, reducing deployment time by **80%**.
- Introduced Redis caching across frequently accessed APIs, reducing redundant backend calls by **60%**.
- Built a real-time emergency dispatch system using MongoDB geospatial queries, WebSockets, and Redis, cutting API latency by **40%** and delivering sub-second alerts, validated under load with JMeter.

Weboccult Technologies Jan 2023 – May 2024
Backend Engineer *Ahmedabad, India*

- Designed and shipped RESTful backend services from scratch using Node.js and Express.js, integrating MongoDB for data storage; collaborated with frontend and product teams on API contracts.
- Engineered a real-time video communication service using Twilio Programmable Video and WebRTC, optimizing session management to increase average user session duration by **25%**.

Skills

Languages : JavaScript (ES6+), TypeScript, Python, PHP
Backend : Node.js, Express.js, REST APIs, GraphQL, WebSockets, Kafka, Microservices
Databases : PostgreSQL, MongoDB, MySQL, Redis, Vector databases (Pinecone)
Cloud & DevOps : AWS (ECS, EC2, Lambda, S3, SQS, SNS, API Gateway, ALB), Docker, GitHub Actions, CI/CD
AI : LLM Integration, RAG, OpenAI API, Vector Search
Testing & Tools : Jest, JMeter, k6, Postman, Git

Projects

Vaidya Assist | *Node.js, Express.js, React.js, MongoDB, RAG*

- Built an AI-powered healthcare assistant using RAG and LLM APIs for contextual queries, doctor discovery, and appointment booking. GitHub

AI Bestie | *Node.js, Express.js, TypeScript, React.js, MongoDB*

- Built an AI companion with Server-Sent Events (SSE) streaming, Gemini/OpenRouter fallback, and 20-message context for personalized conversations.
- Implemented JWT-protected REST APIs, per-user rate limiting, atomic MongoDB message updates, and request cancellation on disconnect to stop unused LLM streams. GitHub

Education

Birla Vishvakarma Mahavidyalaya (B.Tech.) 2019 – 2023
Electronics Engineering *CGPA: 7.6*

Achievements

- Awarded **Employee of the Month** at Mypcot Infotech for contributions to backend architecture and deployment infrastructure.
- Solved **250+ DSA problems** across LeetCode and HackerRank.
- Built a cron-based script to filter healthy leads from a **1.7M-record** dataset, automatically triggering **40K+ user communications**.
